PRODUCT RETIREMENT ANNOUNCEMENT FCPS-24F and FCPS-2404 REPLACED by FCPS-24FS6

July 26, 2005

Dear Valued FireLite Customer,

The FCPS-24F and FCPS-2404 have been workhorse power supplies for FireLite customers ever since 1994. Since that time, over 120,000 of these supplies have been sold with very few problems. In fact the raw data quality level approaches .03% return, an indicator of extremely good quality. However, time marches on and requirements change.

With the requirement for strobe synchronization, FireLite improved the original designs by adding synchronization for System Sensor, Wheelock and Gentex products to the power supplies and created two new versions, the FCPS-24FS6 and FCPS-24FS8 rated at 6 and 8 amps. Many of our customers have switched to these newer power supplies and we now see the quantities of the older units dropping.

Based on customer purchases, we have made a business decision to retire the FCPS-2404, the 110 volt FCPS-24F, and 220 volt FCPS-24FE power supplies by September 1, 2005. We encourage our customers to purchase the improved models.

Sincerely,

A handwritten signature in black ink that reads "Nick Martello".
