 FIRE-LITE® ALARMS
by Honeywell

FireWatch™ IPDACT-2/2UD Planned Release

October 2, 2008
Document FLPA08-10-1

Fire-Lite is pleased to provide advance release information of its latest *FireWatch™* series of Internet/Intranet Communicators. Scheduled for release October, 2008, several new part numbers will be available:

- PN: IPDACT-2.
 - This is a new board that duplicates the previous functions found in the IPDACT. Can be upgraded to an IPDACT-2UD
- PN: IPDACT-2UD.
 - This is the same as the IPDACT-2 for Contact-ID alarm communication but adds upload/download capability to any compatible Fire-Lite panel from anywhere on the Internet or Intranet.
- PN: 2UD
 - This is the daughter modem board that can upgrade an IPDACT-2 to a IPDACT-2UD

Features and Benefits

- UL-864 Ninth Edition
 - Both IPDACT-2 and IPDACT-2UD IP communicators are UL 864 Ninth Edition listed under type signaling OT (Other Technologies) PSDN (Packet Switched Data Network) and require a compatible Teldat VisorALARM-Plus central station receiver.
- Eliminates both phone lines.
 - While a backup phone line can be used on the fire panel's second telephone port, it does not require a redundant reporting path.
- Any Ethernet Connection
 - The Communicators require a customer supplied Ethernet connection to the Internet or Intranet and can be connected to any style of Ethernet media such as cable or DSL.
- Three IP addresses
 - The new communicators support three IP addresses for primary and backup central station receivers and for secondary monitoring at a third location.
- Compatible panels
 - The new models are listed for use with MS-9050UD, MS-9200UDLS, MS-9600UDLS, MS-5UD-3 and MS-5UD-7 and can mount inside the common enclosure using the optional bracket PN: IPBRKT
- Legacy Panels
 - The communicators have also been listed for many older Fire-Lite panels including, MS-9200UD, MS-9600 with optional DACT-UD, MS-5024UD and MS-5210UD. The IPENC or the HP300ULX power supply is used for mounting the communicators next to these older panels.

- Use on Any Fire Panel
 - For monitoring competitive panels, IPDACT-2 is used with the 411UD slave dialer mounted inside the HP300ULX.

For complete information, go to www.firelite.com and download datasheet DF-60407. To obtain pricing and ordering information, please contact our Customer Service Department: [at 1-800-627-3473](tel:1-800-627-3473).

Sincerely,

A handwritten signature in black ink that reads "Nick Martello". The signature is written in a cursive, slightly slanted style.
