## FC-25/50DA Replaced Effective Immediately

**November 10, 2006**  
**Document FLPR06-12-1**

Dear Business Partner,

FireLite is pleased to announce the replacement of the Fire Command FC-25/50DA distributed audio panel with the advanced technology Audio Command Center ACC-25/50DA. Fully backward compatible to the FC-25/50DA, up to 25 of the ACC-25/50DA panels can be used to expand the ACC-25/50 master voice evacuation panel. When each ACC-25/50DA panel is expanded to a full 50 watts, the fully loaded system can distribute 1300 watts throughout a facility. The new enhancements found in the ACC-25/50DA will meet even the most demanding single channel audio evacuation application.

For a full list of features and options, go to [www.firelite.com/datasheets and download datasheet DF-52425](http://www.firelite.com/datasheets_and_download/datasheet_DF-52425).

Customers with existing orders for any FC-25/50DA panels will automatically receive the new model. Repair boards for the FC-25/50DA will continue to be available as long as components can be obtained.

Sincerely,

Nick Martello  
Fire-Lite Marketing Director
