

Product Announcement

MS-9050UD Upload/Download Software Released

December 10, 2007

Document FLPA07-12-01

Fire-Lite is pleased to announce the availability of version 2.2 of the PK-CD that provides upload/download utilities for all of the Fire-Lite addressable panels including MS-9050UD. This release includes PK-PLUS version 3.1 and PPU wizard V3.1. However, since the actual 2.2 version of PK-CD will not be available through distribution for a week or so, customers needing an immediate copy for the MS-9050UD can download one from www.firelite.com/pktools. Please follow the directions below for unzipping the files. As these files are quite large, a high speed Internet connection should be used.

All files must be extracted to the same directory. Create a temporary directory on your PC to download the zipped PK-PLUS files. Go to www.firelite.com/pktools and right click the zipped file, PKPlus31B9.zip. Select "save as" to save the file to the temporary directory on your PC. Run PKUNZIP to extract to the same directory and then run the setup program to install the new PK-PLUS on your laptop.

A new version of the MS-9050UD executive program is also required and must be "flashed" into panel memory before the PK-Plus update will work with the panel. Customers should retrieve the zipped MS-9050UD version 2.0 flash upgrade firmware ".pro" file labeled 9050UD20B10.zip from www.firelite.com/pktools and, following the PPU wizard instructions also found on this page, use PPU wizard to update the MS-9050UD panel code. PRT/PK-CABLE will be required to connect your laptop's serial port to the panel's serial port. Follow the instructions in the manual to flash your panel's memory to the latest version. Also, please download the latest manual for the MS-9050UD, PN 52413: B from www.firelite.com.

Note that there are some significant changes in the UD version due to UL Ninth Edition requirements. As example, for standard commercial use, remote Upload/Download requires someone on site to enter a password before the Upload or Download will be permitted. For proprietary systems, this can be defaulted to work without a password entry at the site.

For technical assistance with any of the procedures listed above, please contact Technical Support at 1-800-627-3473 to speak to a technician, or email your questions to firelite.tech@honeywell.com.

Sincerely,

A handwritten signature in black ink that reads "Nick Martello".
