TURBOCHARGED BY
 **HONEYWELL FORGE**

CLSS-ENABLED LTE COMMERCIAL FIRE ALARM COMMUNICATOR

Introducing the **HW-TG7L Series of CLSS LTE Fire Communicators**, enabled by cooperation with Telguard® and turbocharged by Honeywell Forge.

Dialer capture is reimagined by combining **Telguard's TG-7FS** LTE cellular communicators with the powerful functionality of Honeywell's **Connected Life Safety Services (CLSS)**.

CLSS is an innovative, all-in-one cloud solution built on Honeywell Forge, a powerful analytics platform that enables real-time data and visual intelligence for connected buildings. CLSS equips fire systems installers and facilities managers to deliver enhanced fire safety services while maximizing the performance of Honeywell's trusted detection and notification systems.

With CLSS, users can:

- Manage all accounts with a “bird’s eye” view
- Diagnose before dispatch with real-time event generation
- Provide end users with event alerts and multi-site asset information

A drop-in replacement for all your fire communication needs:

- AT&T (HW-TG7LAF02) and Verizon Wireless (HW-TG7LVF02) LTE network availability
- Sole, primary, or backup path communications
- Supports most common alarm formats, including Contact ID
- 5- or 60-minute supervision modes*

* 180 seconds is available in Canada

IT'S MORE THAN JUST AN UPGRADE — IT'S DIALER CAPTURE REIMAGINED.
