

Protection Never Strikes Out

Stadium Managers Rely on Fire-Lite Alarms for Total Life Safety

Value and dependability are key factors in putting in a fire and voice system as well as being simple to operate and maintain. Fire-Lite Alarms' non-proprietary equipment and open source capabilities allow assembly locations, like ballparks, to find parts and have service done by any qualified service provider.

With a Fire-Lite Alarm system you can relax knowing your fans are protected. We offer a complete line of fire alarm, emergency communication, and detection products that allow for added flexibility and security while saving money without sacrificing the comfortable atmosphere your attendees deserve.

Fire-Lite Alarms has a long history of being the #1 non-proprietary fire & life safety product provider.

With over 60 years of experience:

- We offer cost-effective systems with the flexibility for not only new construction but also retrofitting for older systems & buildings.
- As a non-proprietary company, you don't get locked into expensive service contracts or tied into one service provider. This flexibility gives you options regarding who manages and services your life safety system.
- Fire-Lite Alarms offers free, hands-on training at over 50 locations nationwide as well as online! Our training is open to anyone interested in installing and servicing our products. Electricians, facility and maintenance staff, owners, etc... all are welcome.
- If you need assistance, you can call or email our Technical Support Team. Our Tech Support Team is continuously improving their skills to better serve you.
- We also have a large compilation of 'how-to' videos on YouTube to show and tell you the answers to common questions.
- Fire-Lite Alarms' products are proudly assembled in the U.S.A.

"It's a large investment for us and we wanted to make sure we were getting a good value for what we were paying for. It's a ballpark; it's a large facility and we needed a dependable system that would allow us to identify and take care of any issues as quickly as possible."

*- Shaun Meredith, Director of Facilities,
Northeast Delta Dental Stadium*

Fire-Lite's NEW Emergency Command Center

Mass notification is about delivering critical messages when and where they matter most – for fire, extreme weather, accidents, toxic leaks, aggressive or dangerous intruders – any threat to your occupants or your facility. Fire-Lite's NEW Emergency Command Center (ECC) was designed to be the most scalable, flexible, multi-zoned, highly configurable fire evacuation and mass notification system on the market that's easy use and maintain. Key reasons to consider ECC as a part of your life safety system:

Seamless Integration

Integration between your mass notification solution and your fire alarm system is critical - Unfortunately in today's world threats and violent acts occur far too often. It isn't hard to imagine extreme circumstances in which an intruder attempts to cause confusion or panic by activating the fire alarm system. Your staff may not be able to safely access the microphone, but our system allows authorized personnel to use any telephone to call into the system and take command from a safe location while issuing life saving messages.

Multi Purpose Functions

The ECC can be used for non-emergency functions such as supervised live paging, background music and pre-recorded general messages. These features are very easy for non-technical staff to use and customize. Fire-Lite Alarms also offers a free iPad app available on iTunes that lets you or your staff experience how easy it is to interact with the ECC system.

Save Money on Retrofits

By leveraging the existing speakers/strobes from your current fire system, the ECC relieves the financial burden of installing expensive components you don't need.

Scalable Configuration

ECC's remarkably flexible & modular design means you only buy what fits your needs, without overpaying. As a building expands or as budget money becomes available additional consoles can be added to the system.

UL 2572 is the new standard for the testing of equipment to be used in Emergency Communication and Mass Notification systems.

We are proud to announce that Fire-Lite Alarms is the first non-proprietary brand to receive UL 2572 on our NEW Emergency Communication system!
