B200SR-LF-WH, B200SR-LF-IV
Low Frequency Intelligent Sounder Base

SPECIFICATIONS
Base Diameter: 6.875” (17.46 cm)
Base Height (less sensor): 2.0” (5.08 cm)
Weight: 0.6 lb. (272 gm)
Operating Temperature Range: Refer to applicable sensor Operating Temperature Range using the Base/Sensor Cross Reference Chart at systemsensor.com
Operating Humidity Range: 10% to 93% relative humidity (non-condensing)
External Supply Voltage: 16 to 33 VDC (VFWR)
External Supply Electrical Ratings
- Operating Humidity Range: Refer to applicable sensor specification
- Sound Output: Greater than 85 dBA minimum measured in a UL reverberant room at 10 feet, 24 Volts (in continuous tone)

BEFORE INSTALLING
Read System Sensor’s Applications Guide for System Smoke Detectors (SPAG91), which provides detailed information on sensor spacing, placement, zoning, wiring, and special applications. This manual is available online at www.systemsensor.com. NFPA 72 and NEMA guidelines should be observed. The National Fire Alarm Code, NFPA 72, requires effective January 1, 2014, that audible appliances installed in sleeping areas produce a low frequency alarm signal that shall be a square wave or provide equivalent awakening ability with a fundamental frequency of 520 Hz +/- 10%.

NOTICE: This manual should be left with the owner/user of this equipment.

IMPORTANT: The detector used with this base must be tested and maintained regularly following NFPA 72 requirements. The detector should be cleaned at least once a year.

GENERAL DESCRIPTION
The B200SR-LF-WH and B200SR-LF-IV sounder bases are used with addressable detector heads. For a list of compatible sensors, refer to the System Sensor website at www.systemsensor.com. Refer to the appropriate manual for more information on sensors.

The B200SR-LF-WH/B200SR-LF-IV low frequency sounder base generates a low frequency tone around 520 Hz. Studies have shown that audible devices installed in sleeping areas produce a low frequency alarm signal that shall be a square wave or provide equivalent awakening ability with a fundamental frequency of 520 Hz +/- 10%.

The sounder base is intended for use with intelligent systems. The sounder base requires an external 24 VDC power supply. The connections for the external power supply and the communication circuit wires should be twisted pair or shielded cable installed in a separate grounded conduit to prevent electrical interference.

WIRING GUIDELINES
All wiring must be installed in compliance with the National Electrical Code and the local codes having jurisdiction and must not be of such length or wire size which would cause the base to operate outside of its published specifications. Improper connections can prevent a system from responding properly in the event of a fire.

Make wire connections by stripping about 1/8” of insulation from the end of the wire. Then, slide the bare end of the wire under the clamping plate. For best system performance, the power (+ and -) wires and the communication circuit wires should be twisted pair or shielded cable installed in a separate grounded conduit to protect the communication loop from electrical interference.

For system monitoring - for terminals 4 and 5, do not use looped wire under terminals. Break wire run as shown in Figure 2 to provide monitoring of connections.

**MOUNTING**

Mount the B200SR-LF-WH/B200SR-LF-IV mounting plate directly to an electrical box. The plate will mount directly to 4” square (with and without plaster ring), 4” octagon, 3½” octagon, single gang or double gang junction boxes.

1. Connect field wiring to terminals, as shown in Figure 1 and 2.
2. Attach the mounting plate to the junction box as shown in Figure 3.
3. To mount the sounder base, hook the tab on the sounder base to the groove on the mounting plate.
4. Then, swing the sounder base into position to engage the pins on the product with the terminals on the mounting plate.
5. Secure the sounder base by tightening the mounting screws.
6. Install a compatible smoke sensor as described in the installation manual for the sensor.

---

**CAUTION**

Do not over tighten mounting plate screws; this may cause mounting plate to flex.

**TAMPER RESISTANT FEATURE**

NOTE: Do not use the tamper-resist feature if the removal tool is to be used. This detector base includes a tamper-resist feature that prevents its removal from the base without the use of a tool. To activate this feature, break the tab from the detector base as shown in Figure 4A. Then, install the detector. To remove the detector from the base once the tamper-resist feature has been activated, insert a small-bladed screwdriver into the slot from the top and press down on the lever (see Figure 4B). This allows the detector to be rotated counterclockwise for removal. The tamper-resist feature can be defeated by breaking and removing the plastic lever from the base. However, this prevents the feature from being used again.

**TESTING AND MAINTENANCE**

Sensors and bases must be tested after installation and as an integral part of a periodic maintenance program. Test the B200SR-LF-WH/B200SR-LF-IV as follows:

NOTE: Before testing, notify the proper authorities that the smoke sensor system is undergoing maintenance and, therefore, will be temporarily out of service. Disable the system undergoing maintenance to prevent unwanted alarms.

1. If configured as in Figure 5 and 6, reverse the polarity of the external 24VDC supply. If configured as in Figure 6, turn on the Intelligent Relay Module. All B200SR-LF-WH/B200SR-LF-IV bases on the loop should sound.
2. Latch the sensor LED on from the control panel. That individual sensor’s B200SR-LF-WH/B200SR-LF-IV should sound.

When performing maintenance on connected smoke sensors, carefully note the location and address of each removed sensor.

**FIGURE 5: WIRING DIAGRAM**

**DETECTOR ACTIVATES SOUNDER BASE(S) - (COMPLIES WITH UL268)**

UL has approved grouping for up to six B200SR-LF-WH or B200SR-LF-IV low frequency sounder bases. When wired as a group, any detector in the group that has been activated by the panel will cause other B200SR-LF-WH or B200SR-LF-IV units in the group to sound. This type of “local” grouping is accomplished by wiring the grouped devices together using terminal 6, Sounder Base Interconnect, as shown in the diagram. This interconnect can also be used to attach B200SR-LF-WH or B200SR-LF-IV devices to System Sensor B501-Series sounder bases. Some Fire Alarm Control Panels (FACP) support the grouping of sounder bases via software in lieu of the Sounder Base Interconnect.

**NOTE:** A local grouping of horns via the sounder base interconnect is not supervised, therefore the groups can only be used as a supplementary evacuation system. It is not acceptable to group horns via the sounder base interconnect for primary alarm signaling. Sounder bases which are grouped via software are not subject to this limitation and may be used as part of the primary alarm signaling.

System Sensor warrants its enclosed smoke detector base to be free from defects in materials and workmanship under normal use and service for a period of three years from date of manufacture. System Sensor makes no other express warranty for this smoke detector base. No agent, representative, dealer, or employee of the Company has the authority to increase or alter the obligations or limitations of this Warranty. The Company’s obligation of this Warranty shall be limited to the repair or replacement of any part of the smoke detector base which is found to be defective in materials or workmanship under normal use and service during the three year period commencing with the date of manufacture. After phoning System Sensor’s toll free number 800-SENSOR2 (736-7672) for a Return Authorization number, send defective units postage prepaid to: Honeywell, 12220 Rojas Drive, Suite 700, El Paso TX 79936, USA. Please include a note describing the malfunction and suspected cause of failure. The Company shall not be obligated to repair or replace units which are found to be defective because of damage, unreasonable use, modifications, or alterations occurring after the date of manufacture. In no case shall the Company be liable for any consequential or incidental damages for breach of this or any other Warranty, expressed or implied whatsoever, even if the loss or damage is caused by the Company’s negligence or fault. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. This Warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Please refer to insert for the Limitations of Fire Alarm Systems

NOTE: B200SR-LF-WH and B200SR-LF-IV replace the previous model number B200SR-LF; all are functionally the same.
