**MMF-300-10(A)**

**Ten-Input Monitor Module**

---

**General**

The **MMF-300-10** ten-input monitor module is an interface between a control panel and normally open contact devices in intelligent alarm systems such as pull stations, security contacts, or flow switches.

The first address on the MMF-300-10 is set from 01 to 150 and the remaining modules are automatically assigned to the next nine higher addresses. Provisions are included for disabling a maximum of two unused addresses.

The supervised state (normal, open, or short) of the monitored device is sent back to the panel. A common SLC input is used for all modules, and the initiating device loops share a common supervisory supply and ground — otherwise each monitor operates independently from the others.

Each MMF-300-10 module has panel-controlled green LED indicators. The panel can cause the LEDs to blink, latch on, or latch off.

**NOTE:** Unless otherwise specified, the term MMF-300-10 is used in this data sheet to refer to both the MMF-300-10 and the MMF-300-10A (ULC-listed version).
