PS-TOOLS Version 2.0 Released!

October 28, 2008
Document FLPA08-10-4

Fire-Lite is pleased to announce the first release of PS-TOOLS panel programming software. This entirely redesigned programming software uses the latest technology and provides many new features not found in previous PK-Plus programming software. This release of PS-Tools supports direct connect to the MS-9200UDLS version 4.0 and MS-5UD/10UD version 2.0 panels via USB connection and remote connection via modem. The new software provides many new formatted reports and features a complete customer database to allow storage of new installations for future edits or additions.

While the software will become part of PN: PK-CD in the near future, customers needing this right away can download the latest version from www.firelite.com/support. The new PS-Tools software provides an automatic conversion of older databases found in previous MS-9200UDLS panels. However, customers are advised to contact tech support for information about updating older panel databases such as MS-9200 and MS-9200UD panels for conversion to the new version database used in the latest MS-9200UDLS 4.0 panels.

It is Fire-Lite's intention to continue development of PS-TOOLS to allow support for all Fire-Lite panels in the near future. However, PK-PLUS will still be required in the short term for MS-9050UD and MS-9600 panels. As new panel releases are announced such as the new MS-9600UDLS, customers are advised to check the website at www.firelite.com/support for the latest version of PS-TOOLS.

For assistance using the new PS-TOOLS or for questions regarding updating older panel databases please contact tech support at 1-800-627-3473 to speak to a technician or [e-mail Technical Support](mailto:firelite.tech@honeywell.com) questions to firelite.tech@honeywell.com.

Sincerely,

Nick Martello
Fire-Lite Marketing Director
